DIMAS MAENDRA UTOMO

About Me

I am interested in software development, and have 3 years of experience as a programmer, mainly in Java and JavaScript programming languages. For java programming, I use the spring framework and for javascript programming, I use node js on the backend side and react js on the front end side. On the database side I usually use SQL server and Postgres SQL, here I can create functions, stored procedures, schedules, tables, queries, etc. outside of work I also tried several popular programming languages independently such as PHP with laravel framework or golang.
